

Group project meeting minutes for 06/02/2020.

Present at meeting: jab167, jas117, wip14, wos2, ars21, vad7, and jor69.

Meeting start time: 17:10.

Meeting end time: 17:55.

Architecture (jas117 and jab167)

17:14-17:22 - Jaime brings forward a document on the proposed architecture designed by him and Jacob earlier that week. The document is a description of the classes used and a brief description of what the purpose of each class is.

Jaime and Jacob are tasked with making another document about the functional requirements and to make a UML class diagram showing how the program would work.

User Interface (wip14 and wos2)

17:25-17:38 - Will does a short presentation on the design of the interface that was done by the interface team. The design for the interface details the placement for the buttons and the search bar. The design also mentions the design choice of having the practice words and the dictionary words on the same page. Wojciech talks about using JavaFX for the UI.

Will is tasked with choosing a few colour schemes to bring back to the group so a final colour scheme can be selected and Wojciech will continue to work on JavaFX.

Testing (vad7 and ars21)

17:39-17:47 - Valentin and Andreas do a short presentation about the work the testing team has done. The testing team created a table that details the tests all of the main functions (such as searching, adding, flashcards, etc) would have to undergo to try and eliminate as many bugs as possible for the program.

Valentin and Andreas are tasked with continuing their work on the testing by looking at what the other teams have done and how those design choices could lead to additional bugs.

Summary

17:52-17:55 - the group recaps what they've been over in today's session and everyone is reminded of their new tasks.
